

Sustainability guidance for the waste sector

Examples of how we turn concepts into actions for a better and more sustainable waste management

Sufficiency Economy Philosophy (SEP)

is a decision-making framework that guides us to solve problems or take actions in different situations aiming towards stability, balance and sustainability

MODERATENESS

Refrain from over and wasteful production and consumption

RATIONALITY

Minimize use of resources in every step of product life cycle

IMMUNITY

Increase resilience to health, environmental and climate change risks

KNOWLEDGE

Base on complete and transparent data on resource and waste flows.

MORAL

Adhere to holistic view, polluter-pay principles, ensure decent work and public benefit

Shifting from the linear economy, **Circular Economy** is a concept aiming to make the most of resources and ultimately produce no waste. It promotes reduction, reuse and recycling of materials along the production, distribution and consumption processes.

Integrated Waste Management combines all available methods to manage waste and wastewater for the best outcome that reduces cost, protects environment and fits with the given conditions in respective areas.

- Incentivise sustainable business, production and consumption
- Internalise social, environmental and climate cost

- Reduce environmental pollution and greenhouse gases emission
- Rehabilitate nature and environment

- Shift from linear to circular economy
- Decentralise resource and waste management and leadership

- Reduce health risks and improve occupational health
- Reduce convenience culture and wasteful lifestyle
